## Guidelines

Passing Yards

25 yards per point

Passing Touchdowns

4

Rushing Yards

10 yards per point

Rushing Touchdowns 6

(

Reception Yards

10 yards per point

Reception Touchdowns 6

Hypothesis: is a possible explanation for a set of observations or answer to a scientific question.

Variable: Any factor that can change in an experiment.

Example: Choose any two offensive players- Quarterbacks, Receivers, or Running Backs ONLY!

Last week I predicted Aaron Rodgers (Quarterback- Green Bay Packers) would score at least 25 points. In reality, he threw for 480 yards, and had 4 passing touchdowns. His fantasy football total was 35 points. How did I get this total?

Bonus points:

Identify at least three variables that could help or hurt your player's performance.

P.S. Have Fun and Go Cowboys!!!
